

GABRIEL LYANE AREVALO, RECE

Analytics Engineer

Manila, Philippines | glyanearevalo@gmail.com | +63 921 819 5340 | [Portfolio Website](#) | [LinkedIn](#) | [GitHub](#)

SKILLS

Data Engineering & Automation: Python, PostgreSQL & SQL Server, ETL Pipelines, Data Modeling, Data Warehousing, Medallion Architecture, Power Automate, Star & Snowflake Schema

Business Intelligence & Analytics: Power BI (Semantic Models, DAX, Power Query), Microsoft Fabric

Advanced Analytics: Statistics, Excel, AI-assisted Analytics, Prompt Engineering, Retrieval-Augmented Generation (RAG)

Development & Delivery Tools: Git, Azure DevOps, Jupyter Notebook, VS Code

EXPERIENCE

RBox International Solutions

Pasig City

Analytics Engineer II

March 2026 – Present

- Developed a company-wide ChatGPT Skill that standardized document information extraction across business teams, reducing extraction and validation effort by 80%.
- Automated an end-to-end Power Automate workflow, reducing manual processing time from 3 hours to 45 minutes.
- Built a Python API pipeline that retrieved and processed 1,000+ publicly available documents, eliminating manual downloads and supporting downstream analytics.
- Performed market share, financial impact, ROI, and damages analyses that supported strategic planning and executive decision-making.
- Developed an Excel relationship mapping solution with automated organizational chart generation, replacing Visio and improving stakeholder tracking.
- Built AI-assisted data collection workflows using ChatGPT Agents that provide audit logs, documentation, and validation controls to improve data quality, traceability, and governance.
- Tools & Tech:** Python, Microsoft Fabric, Power Automate, Excel, Git, Azure DevOps, ChatGPT, Claude

Data Analyst I

March 2025 – March 2026

- Designed an end-to-end ETL pipeline using Microsoft Fabric Medallion Architecture (Bronze-Silver-Gold), reducing a two-person, four-hour extraction process to under three minutes.
- Developed Power BI semantic models with reusable DAX measures and relationships supporting business reporting.
- Engineered a Python document processing pipeline for 1,000+ documents, reducing the end-users' project turnaround from months to weeks.
- Designed and implemented a semi-automated Python solution, reducing a 2-day manual Excel workflow down to 30 minutes through data standardization and validation.
- Developed a Flask web application prototype with relational database design and automated pricing logic to support internal operations.
- Collaborated with business stakeholders to define KPIs, reporting requirements, and technical documentation supporting leadership decisions and knowledge transfer.
- Tools & Tech:** Python, Microsoft Fabric, Power BI, Power Query, SQLite, Flask, Git, Azure DevOps, Excel

PROJECT

LAPD Crime Data Warehouse and Analytics Project

- Designed a SQL Server data warehouse using dimensional modeling (fact and dimension tables) to support scalable analytics.
- Built SQL ETL pipelines to transform raw crime data into reporting-ready datasets.
- Developed interactive Power BI dashboards for crime trend analysis and KPI reporting.
- Tools & Tech:** SQL Server, ETL, Data Modeling, Power BI, Git

EDUCATION

University of the City of Manila – B.S. in Electronics Engineering (BS ECE)
